

Case Study:

Susquehanna UNIVERSITY

Client Information:

- **Organization:** Susquehanna University, www.susqu.edu
- **Client Location:** Selinsgrove, Pennsylvania
- **MPOC:** Chris Bailey, Director of Facilities Management
- **Time-frame:** September, 2020

Why did you invest in Boski's UV-C Rapid Air Sanitizers?

"This is was in response to what's transpired with Covid-19 – Boski provides a simple device that utilizes proven technology to reduce the risk of airborne virus transmission"

What is your area of responsibility pertaining to health & safety on campus?

"I'm currently overseeing the physical management of the Covid response – signage, HVAC modifications and more."

What is the core application of the Boski devices on campus at Susquehanna?

"Placing one Boski device in student dorm rooms that have double occupancy. Our goal is to help reduce the amount of any airborne virus particles that could be present in the rooms. "

"We weren't able to quickly and cost-effectively implement UV-C into our large air handlers on campus due to expense and availability. Being able to quickly deploy Boski in the spaces where students are living, at a reasonable price point, created a great opportunity for us to add strength to our health & safety protocols."

What kind of message has Boski helped Susquehanna deliver to parents of students on campus?

"Our deployment of Boski Rapid Air Sanitizers is a tangible representation of the measures we are taking to try to keep students as safe as possible on campus. When parents come in and see the Boski unit, which almost looks like Apple designed it, it gives them added levels of safety assurance. The feedback received thus far has been great. A win-win-win all around."

What made you choose Boski over similar products?

"Price point, very simple to use and safety. The UV-C light is self-contained and the only way to access it would be breaking the unit open, which would likely render it non-operational. Boski was a perfect supplemental fit to our overall program. We've already placed over 900 units in student dorm rooms and by the time we're done, we'll have deployed almost 1,000 units across campus."

Would you recommend Boski?

"I'd absolutely recommend Boski – they made promises and delivered. As a Facilities Director, Boski helps me give assurances that everything is being done to keep people as safe and healthy as possible. I'm looking forward to a long and successful partnership with Boski. "
